**FLUSHING
SYSTEMS**
أنظمة التنظيف

Can we save water in our bathrooms?

One of the easiest ways to save water is to install a toilet with a dual-flush cistern.

Dual-flush cisterns let the user choose how much water to use when flushing the toilet and they are designed for wall-hung, back-to-wall and close coupled water closets.

RAK Ceramics flushing systems, allow you to choose using the full flush or the half flush, with different flushing volumes: 6 Liters for the full and 3 Liters for the half flush. The cisterns can also be adjusted to flush with a reduced full flush volume at 4.5 Liters.

For countries with limited water resources, RAK Ceramics has developed innovative water closets perfectly flushing with a reduced 3 Liters single flush.

By using a lower volume of water to flush the toilet you can dramatically reduce your annual water consumption.

Waterless urinal

RAK-Venice is a urinal perfectly functioning with no use of water: we call it Waterless.

RAK Ceramic's Waterless system is unlike any other dry valve in the market, helping to: eliminate restroom odors, provide the most robust flow rate, make maintenance and clean up easier, and provide a more hygienic solution in the restroom. The maintenance of our Waterless system is easy and fast, the green visual indicator is made of biodegradable ingredients that inform when it's time to change out your cartridge (approx. 7500 uses).
